

preferred by kernel ranking

s1 flips: $P_{11} = 2.4 > P_{12} = 0.8$ s1 restored: $t2 \cdot S_col$ agrees ($t1 \rightarrow s2, t2 \rightarrow s1$)

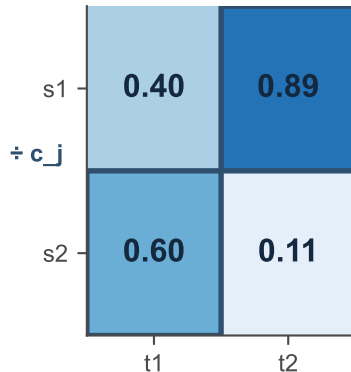

(a) Kernel scores K
favors true edges $s1 \rightarrow t2, s2 \rightarrow t1$

(b) Raw plan $P = \text{diag}(u)K \text{diag}(v)$
destination scaling $v = (4, 1)$

(c) Conditional scores $S_row = P / c$
 $c1 = 6.0, c2 = 0.9$

Illustrative arithmetic only; not experimental data.
